Access

Start from Osaka (Umeda) (it takes 5 minutes by car).
Take the subway Line Tanimachi at 「Tenmabashi」 station, and it takes 7 minutes by walk;
or take the subway Line JR Tozai at 「Osaka Tenmangu」 station, Line Sakaisuji at 「Minamimorimachi」 station, it takes 10 minutes by walk.

Provide Practical Professional Guidance; Cultivate Talents Active in the World

Guided by Industry Experts, Master Professional Knowledge

Founded in 1895, Osaka College of Technology (OCT) possesses a history of 121 years. Through architecture, design, industry and other "manufacturing" related practical guidance, the college has constantly cultivated international talents are active around the world.

2 years of professional teaching will endow the students with highly flexible creativity, site coping capacity and communication skills. OCT offers 7 majors including architecture, architectural design, equipment environment design, carpentry skills, interior design, robot and machinery. The highlight is that even in the "architecture" field, the major can also be subdivided according to professional emphasis of design or equipment, entitling the students

with access to more in-depth knowledge. In architectural design major, practical curriculum and design competition is designed for actual apartment renovation, and the best student scheme will be adopted for the actual construction. In the major of carpentry skills, students can personally experience the basic use of chisels and planes until the completion of actual wooden structures. All majors can endow the students with general practical work ability in the industry via first-hand experiences. In the major of robot and machinery, we aim to cultivate the students to become the experts in robot and machinery, students will make robots planned and designed by their own, and debut them in the national special school robot competition. The college provides rich support for the students to obtain all sorts of qualifications

such as architect, interior design consultant, and mechanical design technician, etc. The annual percent of pass is above the national average line. Thanks to the professional knowledge learned in school, graduates take pride in the high employment rate. Professional instructors who are active in the first line of the industry give instructions to graduates for their job searching and introduce employment units to job seekers base on their rich talent networks. A large number of graduates of the college are active around the world by participating in the construction of large buildings such as super high-rise buildings, airports and so on all over the world, taking part in the world expos and delivering overseas speeches, etc, winning themselves high reputation in the industry.

Entrance Examination Information

Major name	Schooling length	Application qualification	Selection method	Entrance selection examination fee Application duration Examination time	First year tuition fee and other payment (Unit: Yen)				
					Admission fee	Tuition fee	Facility fee	Entrusted collection fee	Total

Support for Overseas Students

★ **Further Studies Support Subsidy System**
Take graduates (or about to graduate in March 2018) from four-year universities, short-term universities and special colleges (professional curriculum) at the enrollment targets, and provide an annual tuition support of 100,000 yen (200,000 yen in total for 2 years.)

★ **Life Support**
The college has dormitories for students and provides meticulous help to overseas students for their life in Japan. In the dormitory, furniture, appliances and other daily necessities are all available, there are resident administrators who can ensure perfect security. In addition, we still offer a wide range of services such as consultation services, helping students to find satisfactory settlements at right price as well as post-occupancy after-sales services and so on. Since we are cooperating with professional companies, please rest assured. What's more, the perfect work-study program enables the students to ensure their studies while work.

★ **Japanese Language Skill Lecture**
Targeting overseas students, Japanese Language Skill Lecture is provided once a week (90 Minutes) for freshmen during the schooling period. Learn Japanese language foundations (reading, writing, listening and speaking) and increase the ability of understanding during classes.

★ **Employment Support**
Thanks to the solid professional knowledge they've acquired in the college; graduates' employment rate has reached 100%. Each graduate has received 10 letters of recruitment invitation on average; by the reference proposal from the faculty members who are

Most Graduate of Our College Has Been Transferred to Japanese National and Public Universities!

The following is the actual performance of our college about graduate been transferred to Japanese universities. Come and join us for a further target.

Fukui University, Engineering Department, Major in building construction
Kyoto Institute of Technology Industrial Science Department Moulding Major
Utsunomiya University, Engineering Department, Major in construction
Shinshu University, Engineering Department, Major in architecture
Osaka Institute of Technology, Engineering Department, Major in mechanical engineering
Kyoto Prefectural University, Graduate School
Nara Women's University, Life Environment Science Department, Major in life environment
Kyoto University of Art, Art Department, Major in architectural design
Tokyo University of Science, Second Engineering Department, Major in architecture
Kobe Design University, Major in product design
Setsunan University, Science and Engineering Department, Major in architecture
Kobe University, Engineering Department, Major in architecture

familiar with the industry, everyone can find their way forward suited to their own development. The faculty members cooperate with each student for specific and detailed guidance, and careers guidance can start at any time. Providing help for the graduate through original tutorial and centering on mastering basic capability of social person. There are rich and colorful employment support projects such as personal interviews, mock interviews, company visiting and a variety of seminars. There is a great deal of information about recruitment companies in the employment support office; overseas students are free to read the information for

work search activities. Another charm of the college is that it receives large amount of recruitment information every year, the recruitment source is not limited to Kansai region, and it includes enterprises from Kanto and Central Japan as well. As the combat capability, the graduates are active in the enterprises in a wild field such as architecture, equipment, civil engineering, interior decoration, machinery and design, etc. In addition, long-term support for overseas students is still another highlight of the college. Besides, providing long term support for the overseas students is also a notable feature.

Overseas Student Voice

Hope to Make Flexible Use of Learned Technique and Knowledge

In 2010, I visited Japan through youth exchange meeting called "JENESYS", which is also my opportunity to choose to study in Japan. Everything I saw at that time was completely different from Cambodia. In my eyes, Japan is a country with high technology. The decisive factor to choose this college is Open Campus. The experience in modeling experience aroused my interest, so I came to Japan and after one year of study in the Japanese language school; I am successfully enrolled by OCT.

I hope I will be able to become a bridge to connect Cambodia, Japan and the world. To this end, I have to work in Japan at first to accumulate experience, after that I hope to engage in a job that allows me to make flexible use of my own technology and knowledge. If I have the chance, I would like to learn about foreign buildings. After graduated from OCT, I have successfully enrolled by Fukui University to study in the architecture design engineering department.

TEA KIMCHENG

From: Cambodia
Major in Architecture Design
Enter into University of Fukui in the middle of the course
Tokyo Institute of Technology Graduate School

Overseas Student Voice

Bazarkhand Ermuun

Original Country: Mongolia
Transferred Student of Osaka University of Technology
Worked for KOBELCO

I chose Japan as my destination of overseas study, because I had living experience in Japan and favored for Japan very much. As I myself was interested in machines, I joined OCT in order to learn mechanical knowledge in Japan which boosts advanced technologies of fine machines. I resettled in Japan and USA in my childhood, and then returned to Mongolia. However, I felt sad that the motherland had no development at all and was still in severe poverty. Due to such experience, I set the goal of becoming national president to increase general GDP in my country by 100 times and drive its economic development. I entered into university in the middle of the course after graduating from OCT. Then, I joined a Japanese enterprise for work. Now I am on-the-job.
